

Myco-Immune

An easy-to-dispense liquid form of well-researched mushroom extracts for immune function support.

Myco-Immune is a blend of seven mushroom extracts shown to provide significant immune support. The liquid form, dispensed by dropper, makes it easy to measure and to put in liquids for children.

Mushroom extracts have been used medicinally by many cultures for thousands of years. It is now known that proteoglycans and polysaccharides, including the alpha-glucans and beta-glucans, are the probable active ingredients in many mushroom species. The seven mushroom extracts in Myco-Immune are well-researched and have been shown in numerous studies to provide significant benefits to immune function. Research has determined that the mushroom extracts in Myco-Immune can increase macrophage and NK-cell activity, phagocytosis, and interferon-gamma and interleukin-1 and -2 production, all of which promote healthy immune function. Cordyceps, reishi, maitake, Schizophyllum, and Tremella stimulate B-lymphocytes and T-lymphocytes, while Cordyceps, shiitake, and Coriolus possess protective activity against harmful microorganisms. Myco-Immune comes in liquid form and is administered by a dropper, so it's ideal for children's supplementation.

Suggested Use

Take 1 dropperful three times daily or as recommended by your health-care professional. Shake well before using. 20-30% alcohol by volume.

Allergy Warning

This product is contraindicated in an individual with a history of hypersensitivity to any of its ingredients. Myco-Immune contains ingredients derived from mushroom sources. Myco-immune contains alcohol.

Pregnancy Warning

If pregnant, consult your health professional before using this product.

Interactions

There are no known adverse interactions or contraindications at publication date.

SUPPLEMENT FACTS
